

PARADIENE 20 HT TS F

Commercial Product Data Sheet

Product Description

Paradiene 20 HT TS F is a high performance, semi-adhered, modified bitumen base ply designed for use in homogeneous multi-layer modified bitumen roof membrane systems. Paradiene 20 HT TS F consists of a fiberglass scrim/fiberglass mat composite impregnated and coated with a high quality elastomeric styrene-butadiene-styrene (SBS) modified bitumen. The top surface is covered with a perforated plastic burn-off film. The unique back surface design consists of factory applied, heat-activated adhesive stripes combined with proprietary acrylic coating between the stripes, which provides for uniform bonding of 50% of the total surface area of the sheet.

Paradiene 20 HT TS F is available with Siplast RoofTag RFID roof asset technology on a Special-Made-To-Order basis. See RoofTag Commercial Product Data Sheet for more information.

Product Uses

Paradiene 20 HT TS F is the first ply of all semi-adhered Siplast Paradiene 20 HT TS F/Paradiene 30 TG Systems. It is lapped 3 inches (7.6 cm) on sides and ends. An alternative to the standard end lap method is seaming end joints using a 12-inch (30.4 cm) wide strip of Paradiene 20 TG. Paradiene 20 HT TS F is specifically designed for high tensile requirements and for use in conjunction with Siplast Paradiene Systems requiring extended warranties. Paradiene 20 HT TS F is designed for direct application to primed structural concrete decks, approved insulations, and other approved substrates. Paradiene 20 HT TS F can only be torch applied. Paradiene 20 HT TS F can only be used as a base ply in multi-layer roof systems with a torch applied finish layer of Paradiene TG, Veral, or Parafor. Contact Siplast for specific approval on the other product uses.

Product Approvals

Paradiene 20 HT TS F is approved by FM Approvals for use as a base ply in Siplast Paradiene 20 HT TS F/30 TG, Paradiene 20 HT TS F/Veral, and Paradiene 20 HT TS F/Parafor non-insulated concrete roof deck constructions, subject to FM conditions and limitations.

Contact Siplast for specific information regarding FM Class 1 windstorm resistance classifications.

Paradiene 20 HT TS F is classified by Underwriters Laboratories as an acceptable substitute for Paradiene 20 TG in all cULus approved listings and assemblies.

Paradiene 20 HT TS F meets or exceeds the requirements of ASTM D 6163 Type II, Grade S, and CSA A123.23-15 Type A, Grade 1 for SBS-modified bituminous sheet materials using glass fiber reinforcements.

Siplast Roof Systems have also received the approval of many regional and local code authorities. Contact Siplast for more information.

COMMERCIAL PRODUCT INFORMATION

Unit:	Roll	
Coverage:	1.0 Square	(9.3 m ²)
Coverage Weight Per Square:	Min: 76 lb	(3.7 kg/m ²)
Roll Length:	Min: 33.5 ft	(10.21 m)
Roll Width:	Avg: 3.28 ft	(1.00 m)
Thickness:*	Avg: 91 mils	(2.3 mm)
	Min: 87 mils	(2.2 mm)
Selvage Width:	Avg: 3 in	(76 mm)

Selvage Surface: Polyolefin Burn-off Film

Top Surfacing: Perforated Polypropylene Film

Back Surfacing: Adhesive Stripes, Acrylic Coating between the Stripes, and Polyolefin Burn-off Film

Lines: A laying line is placed 3 in (7.6 cm) from the selvage edge side of the material. The line color for this material is green.

Packaging: Rolls are wound onto a compressed paper tube. The rolls are placed upright on pallets cushioned with corrugated cardboard and are adhered with adhesive at the labels. The top of the palleted rolls is covered with Kraft paper. The palleted material is protected by a heat shrink polyethylene shroud.

Pallet: 41 in X 48 in (104 cm X 122 cm) wooden pallet

Number Rolls Per Pallet: 25

Number Pallets Per Truckload: 20

Minimum Roll Weight: 76 lb (34.5 kg)

Storage and Handling: All Siplast roll roofing products should be stored on end on a clean flat surface. Care should be taken that rolls are not dropped on ends or edges and are not stored in a leaning position. Deformation resulting from these actions will make proper installation difficult. All roofing should be stored in a dry place, out of direct exposure to the elements, and should not be double stacked. Material should be handled in such a manner as to ensure that it remains dry prior to and during installation.

* Thickness does not include the thickness of the adhesive stripes.

Current copies of all Siplast Commercial Product Data Sheets are posted on the Siplast Web site at www.Siplast.com.
