Accessory Products

Drain Chamber, Gravel Stop, and Separators

Paraguard Vegetated Roof Accessory Products

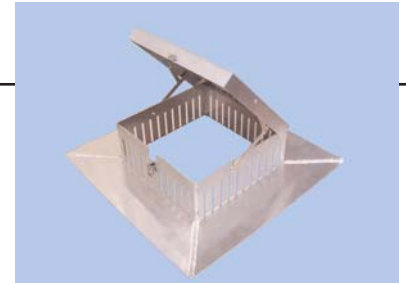

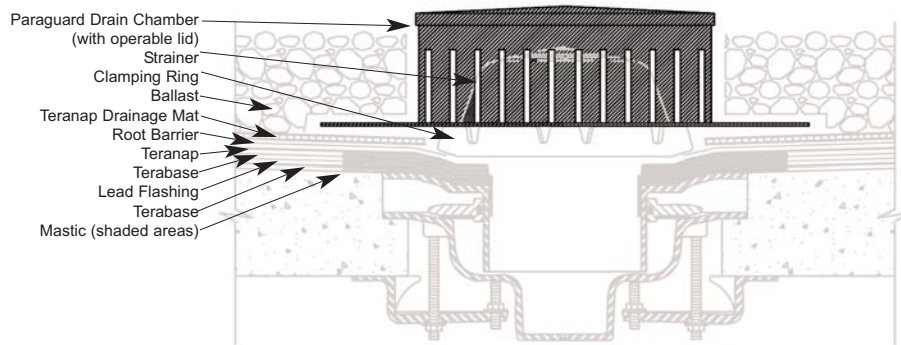

A complete vegetated roof system is the result of a well-planned design, careful selection of appropriate products to meet the installation requirements, and professional application.

The perimeter of the green roof installation is a critical element in the system. Retention and separation of overburden, low maintenance, and aesthetics are all important factors when incorporating a vegetated roof perimeter component into the system.

When the ultimate in total perimeter design is required, Siplast offers Paraguard, the industry's premier metal roof perimeter components, specifically engineered and fabricated for use with Siplast Vegetated Roof Systems. Siplast Paraguard Components are available in mill and anodized finishes as well as a variety of prefinished and spray Kynar colors. Custom colors may be matched individually. Before making final finish and color selection, contact Siplast to ensure availability.

Paraguard Drain Chamber

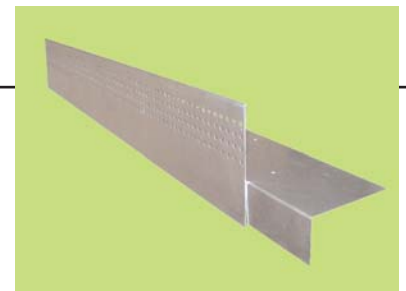

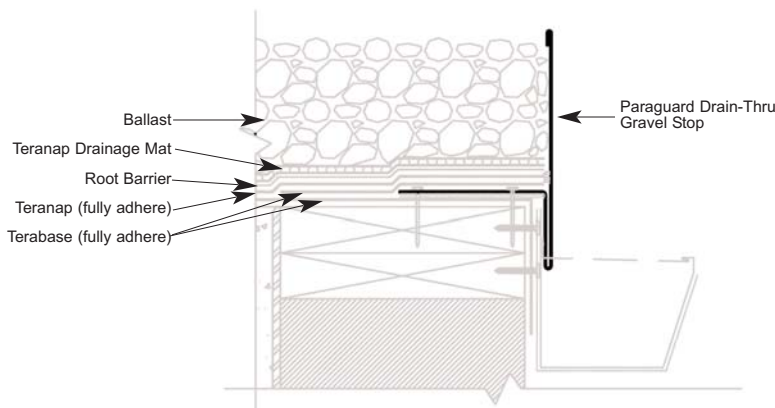

- Fits over the standard internal roof drain assembly.
- Isolates green roof components, ballast, and debris from immediate drain area.
- Facilitates drainage through the entire vegetated roof assembly.
- Hinged cover, which allows for easy maintenance access.

MATERIAL	
Aluminum Stainless Steel	
THICKNESS	
0.080"	22 Gauge 24 Gauge
FINISH	
Coil Kynar Spray Kynar Mill	Clear Anodized Bronze Anodized Black Anodized

Paraguard Drain-Thru Gravel Stop

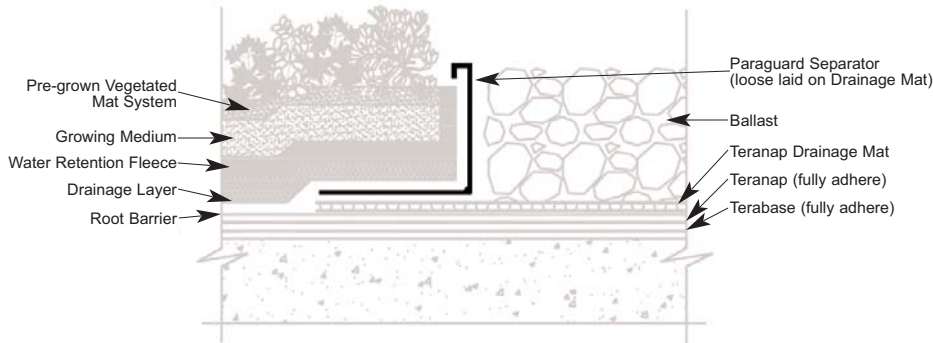

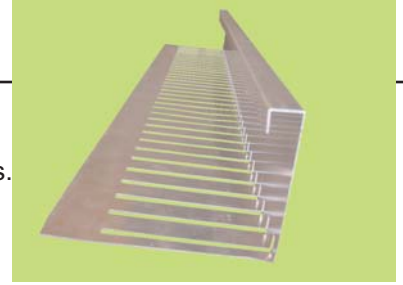

- Special one-piece design eliminates the use of a retainer cleat at the building edge.
- Pre-punched nailing holes in the nailer flange for correct nail placement.
- Perforated raised edge allows for drainage while retaining vegetated roof components and ballast.

MATERIAL	
Aluminum Stainless Steel	
THICKNESS	
0.050"	24 Gauge
FINISH	
Coil Kynar Spray Kynar Mill	Clear Anodized Bronze Anodized Black Anodized

Paraguard Separator

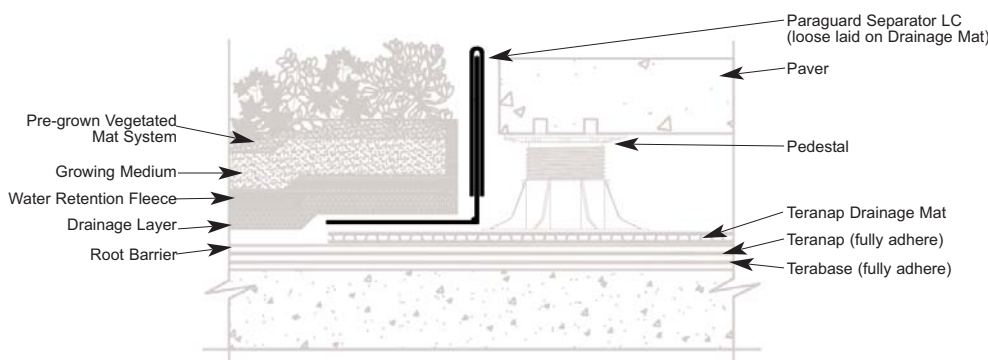

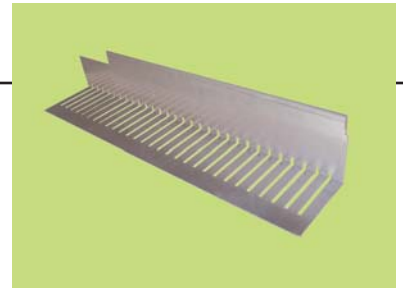

- Slotted base facilitates drainage through the entire vegetated roof assembly.
- Standard factory formed splice-plates, which interlocks base component between sections.
- Standard factory formed corners.
- Available in radius fabrications for curved boundaries between roof vegetation and adjoining ballasted or paver designs.

MATERIAL	
Aluminum Stainless Steel	
THICKNESS	
0.063" 24 Gauge	
FINISH	
Coil Kynar Spray Kynar Mill	Clear Anodized Bronze Anodized Black Anodized

Paraguard Separator LC

- Provides a much smoother, less visible transition line between roof vegetation and the adjoining ballast or pavers.
- Slotted base facilitates drainage through the entire vegetated roof assembly.
- Adjusts to variations in height of vegetated roof system, pavers or ballast.
- Leveling cap interlocks base component between sections.
- Standard factory formed corners.
- Available in radius fabrications for curved boundaries between roof vegetation and adjoining ballasted or paver designs.

MATERIAL	
Aluminum Stainless Steel	
THICKNESS	
0.063" 24 Gauge	
FINISH	
Coil Kynar Spray Kynar Mill	Clear Anodized Bronze Anodized Black Anodized
