Requirements and recommendations detailed in the Siplast catalog and Siplast long form specifications shall apply in addition to the following recommendations and specifications.

**Application**

1. Apply an even, generous base coat of Paraflex Liquid Membrane over the qualified and prepared concrete surface using an approved stub roller at the minimum rate of 3.7 gallons per square.

2. While the previously applied Paraflex Liquid Membrane is still wet, install Pro Fleece reinforcement, embedding the fleece into the liquid material using a roller. Ensure that no air is trapped beneath the fleece. Lap the fleece a minimum 2 inches side and end, and apply an additional coat of liquid material between layers of overlapping fleece.

3. Immediately following embedment of the Pro Fleece reinforcement, apply an even, generous top coat of Paraflex Liquid Membrane at the minimum rate of 1.9 gallons per square, ensuring full saturation of the fleece.

4. Install the approved extruded polystyrene insulation dry over the cured Paraflex Liquid Membrane according to the insulation manufacturer’s specifications and recommendations.

5. Lay one ply of filter fabric dry over the insulation surface according to the filter fabric manufacturer’s specifications and recommendations.

6. Ballast the system with round, river washed gravel at a rate sufficient to counteract wind uplift or buoyancy factors.
