Requirements and recommendations detailed in the Siplast catalog and Siplast long form specifications shall apply in addition to the following recommendations and specifications.

Application

1. Apply an even, generous base coat of Paraflex Liquid Membrane over the qualified and prepared surface using an approved stub roller at a rate of 3.7 gallons per square.

2. While the previously applied Paraflex Liquid Membrane is still wet, install Pro Fleece reinforcement, embedding the fleece into the liquid material using a roller. Ensure that no air is trapped beneath the fleece. Lap the fleece a minimum 2 inches side and end, and apply an additional coat of liquid material between layers of overlapping fleece.

3. Immediately following embedment of the Pro Fleece reinforcement, apply an even, generous top coat of Paraflex Liquid Membrane at a rate of 1.9 gallons per square, ensuring full saturation of the fleece. Allow to cure.

4. Apply an even embedment layer of Paraflex Liquid Membrane over the finished liquid material using a roller at the minimum rate of 1.9 gallons per square.

5. While the previously applied embedment layer is still wet, broadcast a sand key to refusal and allow the liquid material to cure. Following cure, sweep and remove loose sand.

6. Install the approved tile system over the cementitious bed according to the mortar and tile system manufacturer’s specifications and recommendations.
