TERAPRO SYSTEM - UNREINFORCED
SURFACING: PRO COLOR FINISH/PRO TEXTURE BEADS (optional Pro Accent Chips)
SUBSTRATE: CONCRETE OVER UNOCCUPIED/UNCONDITIONED SPACE

Requirements and recommendations detailed in the Siplast catalog and Terapro Installers Guide shall apply in addition to the following recommendations and specifications.

Preparation & Application

1. Qualify the concrete substrate in accordance with Siplast specifications and prepare by shotblasting or scarification followed by shotblasting to a CSP 2 to CSP 4 profile.
2. Prime the prepared concrete substrate using catalyzed Pro Primer T and allow to cure for a minimum 45 minutes.
3. Apply catalyzed Terapro VTS Resin/Filler mixture evenly over the primed substrate using a trowel or stub roller. Before the mixture is cured, use a spiked roller to smooth the surface. Allow to cure for a minimum of 1 hour.
4. Apply a smooth, even layer of catalyzed Pro Color Finish using a roller.
5. Immediately following application of the Pro Color Finish, broadcast an even application of Pro Texture Beads into the wet resin before it cures using a hopper gun at the rate required to provide the desired texture. Backroll the Pro Color Finish/Pro Texture Bead blend to fully embed the beads.
6. Pro Accent Chip Option: Immediately following embedment of the Pro Texture Beads, broadcast Pro Accent Chips into the wet resin before it cures using a hopper gun at the rate required to provide the desired aesthetic.

---

** Rates are approx. and are dependent upon texture/aesthetic desired.
* Minimum application rates.

** PRO ACCENT CHIPS (optional)
0.01 kg/sf (0.1 kg/m²)**

** PRO TEXTURE BEADS
0.0014 kg/sf (0.015 kg/m²)**

** PRO COLOR FINISH
0.046 kg/sf (0.5 kg/m²)*

** TERAPRO VTS RESIN/FILLER
0.45 kg/sf (4.8 kg/m²)*

** PRO PRIMER T
0.037 kg/sf (0.4 kg/m²)*

** CONCRETE SUBSTRATE
