

Attachment Components

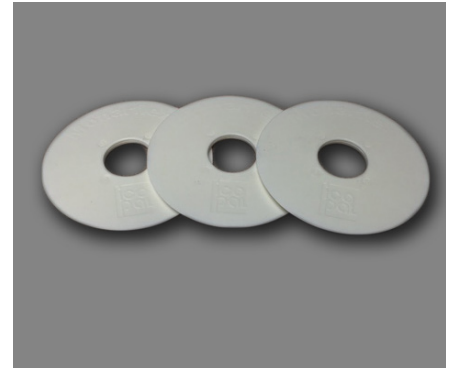

Anchor & Strap

A two-piece connector used where high wind resistance is required. Designed to attach Super T-plus or Scaffband sheeting to the structure being enclosed.

Flexitie

A strong and flexible, bungee style attachment for medium duty wind resistance applications. Designed to attach Super T-plus or Scaffband sheeting to the structure being enclosed.

Self-Adhesive Grommet

A peel and stick grommet for adding grommets as needed to Super T-plus sheeting.

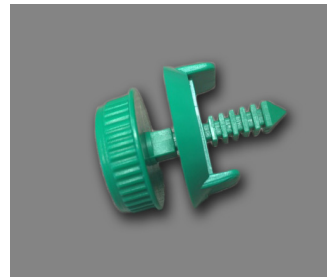

Poly Toggle, Wedge, & Strap

Three separate components that together create a unique attachment. The Poly Toggle snaps securely into the Super T-plus grommet forming an air & water resistant seal. The Wedge then locks the Poly Toggle into place, and the strap connects to the wedge to attach the sheeting to the structure being contained.

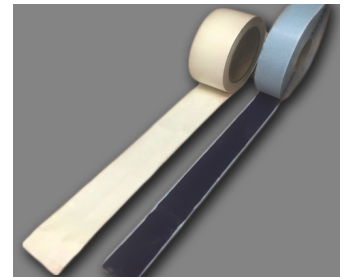

Monostud & Cable Tie

Two components that together create a unique attachment. The Monostud snaps securely into the Super T-plus grommet forming an air & water resistant seal. The cable tie attaches the Monostud to the structure being enclosed.

Tarp Connector

A two-piece mechanical fixing that bonds multiple pieces of Super T-plus or Scaffband sheeting together.

Monobond Tape

Double sided sealant tape for airtight and watertight joints. Available in a blue butyl or white scrim reinforced.
