

# Paratherm® Tapered Pre-Cut Products

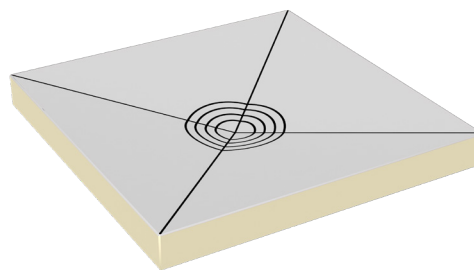

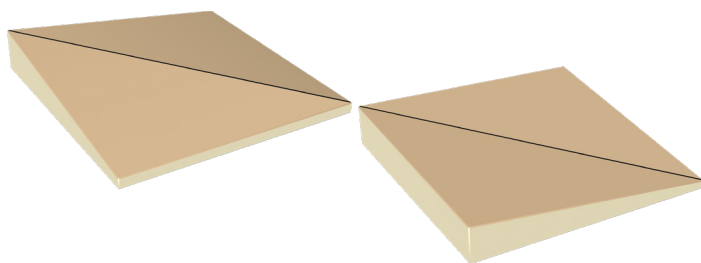

## Time- and Labor-Saving Products

With you every step of the way

### Paratherm® Tapered Pre-Cut Polyiso

Maximize the efficiency of your installation with Paratherm® Tapered products. These products ship ready-to-install as part of your Tapered Design project and are also available a la carte. Either way, your crew can install panels at a faster rate without requiring skilled labor to do the cutting.

### Pre-Cut Hips & Valleys

Paratherm® Tapered Pre-Cut Hips (slope outward) and Valleys (slope inward) are transitions where slopes meet each other on a 45 degree angle. These panels are traditionally field fabricated on the jobsite and create 50% waste per hip or valley. Paratherm® Tapered Pre-Cut Hips and Valleys arrive pre-cut, assembled, and ready to install minimizing excess material waste. These hips and valleys can help save time, labor, and waste on installation.

#### Product Availability:

- Any tapered panel designation, all slopes
- Paratherm® G Tapered, 20 or 25 psi
- Paratherm® G CG Tapered, 20 or 25 psi
- Paratherm® NH Tapered, 20 or 25 psi
- Paratherm® NH CG Tapered, 20 or 25 psi

#### Packaging:

- Same pieces per unit as a standard panel designation of 4' x 4' bundle of tapered insulation

### Pre-Cut Sumps

Paratherm® Tapered Pre-Cut Sump is a 4' x 4' tapered accessory whose function is to drive water to the lowest point of slope on the roof, at the drain, in a 4-way design. Tapered sumps are commonly field fabricated, which takes skilled labor to cut and install the panels, which results in a lot of waste. Paratherm® Tapered Pre-Cut Sumps arrive assembled with circle guide marks in the center to assist in cutting the hole for the drain. These sumps save time, labor, and waste on installation.

#### Product Availability:

- Paratherm® G CG Tapered 25 psi

#### Pre-cut Sump Packaging:

Sump	Thickness	Pieces per Package
Q1	0.5" - 1.5"	32
Q2	1.5" - 2.5"	19

<sup>1</sup> All tapered Pre-Cuts have limited plant availability.
