

# Terapro VTS Pro Grid Reinforced

A parking garage is a uniquely challenging structure. It must protect cars while withstanding damaging emissions from those same vehicles. It must endure cyclic weathering and mechanical damage. And it must be utilitarian and low maintenance, while also providing a favorable first impression for customers. Terapro VTS Pro Grid Reinforced meets these needs.

## Advantages:

- Pro Grid reinforced, liquid-applied PMMA resin-based system
- Resists shear loads from vehicular traffic
- Full-surface adhesion and impermeable
- Resilient – monolithic, durable, weather/UV resistant
- Fast-curing - ready for traffic in approximately 3 hours when installed properly
- Resistance to typical vehicular fluids and provides a skid resistant surface
- Can be applied in temperatures as low as 32°F
- Low VOC – formulated without solvents and isocyanate
- Utilizes substrate-penetrating primers
- System-integrated detail solutions
- Helps mitigate telegraphing cracks through force distribution\*

The Terapro VTS Pro Grid Reinforced system provides an efficient application with the same hard-wearing surfacing as our traditional Pro Fleece Reinforced system.

## Terapro VTS Pro Grid Reinforced

For Vehicular Traffic Areas Over Occupied (Interior) or Conditioned Spaces

### Suitable For The Following Areas:

- Parking garage decks and ramps over occupied/conditioned space
- Vehicular areas over occupied/conditioned space
- Areas requiring crack mitigation

Terapro VTS bond strength, together with the tough crystal quartz surfacing, lends a level of durability to the system that is not often found in parking deck coatings.

Application is efficient - prime, reinforce, and waterproof in one step. The Terapro Pro Grid reinforcement can reduce the amount of preliminary crack treatment associated with surface preparation.

The Pro Color Finish 16-color palette includes options appropriate for traffic paths, create long-wearing traffic w, and provide low-maintenance color coding for parking garages. To request a physical sample, please contact your Siplast Representative.

### Commitment to Quality

Every batch of Terapro resin is assessed twice in the manufacturing process to help ensure proper formulation for high performance.

However, quality products are meaningless without a quality contractor. Siplast waterproofing systems are installed exclusively by Siplast Select Contractors. These independent professionals have met the qualifications of one of the best contractor certification programs in the industry - ours.

\*Siplast guarantees do not provide coverage for cracking. Refer to [siplast.com](http://siplast.com) for more information on guarantee coverage and restrictions.
